Indoor Air Quality

Indoor Air Quality is a growing concern in today's world. Tobacco, cleaning products, cooking fuels, emissions from furniture and construction materials being identified as the major causes for indoor air pollution.

Notably Formaldehyde is causing the highest concern while assessing Indoor Air Quality. The number of sources of Formaldehyde, within the indoor environment, is what makes the issue even more serious and defining.

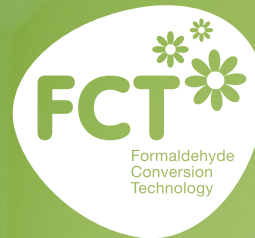

Formaldehyde is a known carcinogen, the exposure to which can lead to difficulties in breathing, eye redness, skin irritation and potential fatalities in the long run.

What if you could reduce those emissions and achieve better Indoor Air Quality?

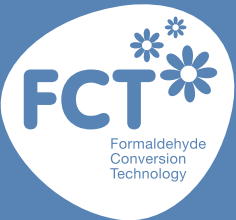

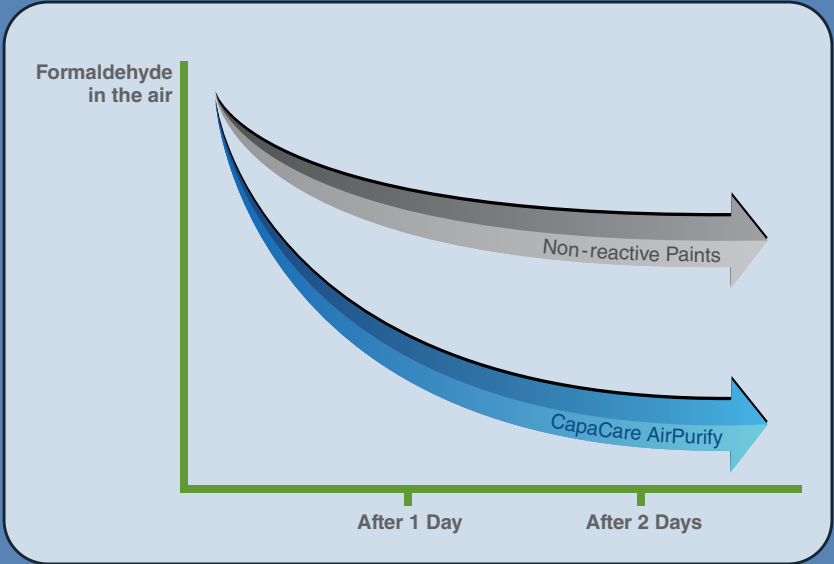

Introducing **CapaCare AirPurify** with FCT

CapaCare AirPurify, a revolutionary paint fortified with Formaldehyde Conversion Technology. This breakthrough product redefines the standards of indoor living. The unique technology behind CapaCare AirPurify helps convert toxic Formaldehyde emissions into harmless water vapour ensuring that indoor air is fresh and safe to breathe. This product has significant long term health benefits for you and your family.

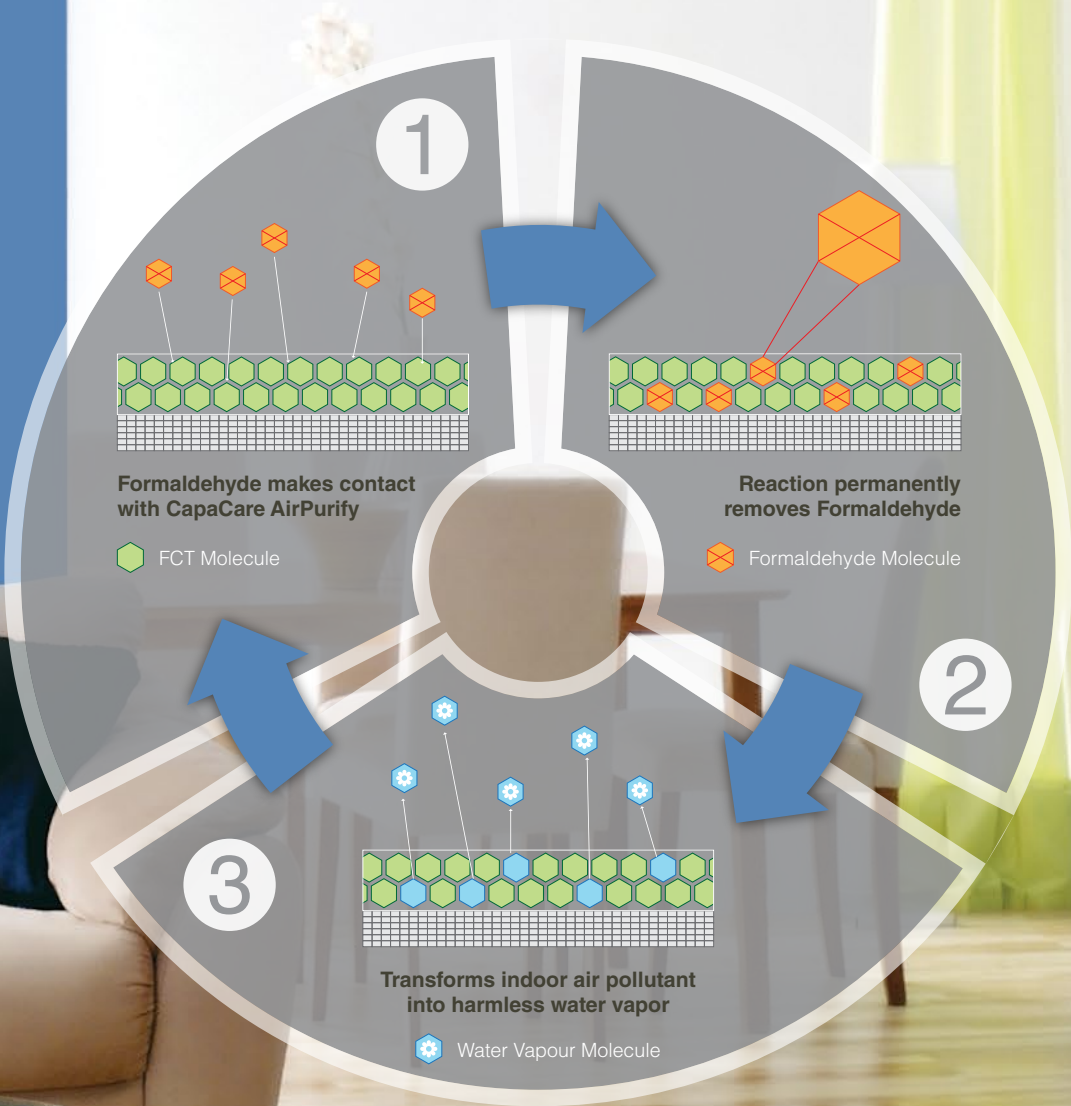

Formaldehyde Conversion Technology

CapaCare AirPurify reduces the Formaldehyde concentration in indoor environments and thereby greatly improves air quality over time. Thanks to a special formulation, Formaldehyde is reduced by up to 68% within the first 24 hours after application.

Let Us Show You How it Works

This breakthrough technology converts harmful Formaldehyde emissions into harmless water vapour that is safe to breathe.

Caparol Paints LLC

Established in 1998, Caparol Paints LLC brings the best of German Technology to meet the needs of the Middle Eastern markets.
